

CNT Toolbox: ENERGY SAVERS PROGRAM

Energy Savers is a one-stop energy efficiency shop for multi-family residential building owners. The program provides building owners with a range of incentives and resources to help them pay for energy efficiency and energy conservation improvements.

www.cntenergy.org

Energy is one of the largest and least predictable operating costs in multi-family buildings. Energy prices are rising fast, and they aren't going down any time soon. It can be difficult to budget and maintain building income when costs vary so much and are so unpredictable.

Fortunately, there's a solution -- energy efficiency. The Energy Savers program is a one-stop energy efficiency shop for owners of multi-family buildings. It's designed to help building owners invest in greater energy efficiency. Investing in energy efficiency pays off by reducing energy costs, improving comfort for building occupants, and maintaining high-quality, affordable rental housing.

The Energy Savers program offers:

- Complete energy assessments and specific energy-efficiency recommendations
- Financing options for implementing energy recommendations
- Assistance coordinating tax benefits and energy credits
- Construction oversight and bid package review
- Annual reports on energy performance

CNT has the capacity to design an Energy Savers Program for your community. CNT can also help identify and leverage resources to implement the energy conservation retrofits. These resources could include loan programs, capital improvement programs, utility incentives, tax incentives and gap funding. Finally, CNT will develop a system to assure that efficiencies are realized and continue over time.
