

True Affordability and Location Efficiency

H+TSM Affordability Index

Hartford, CT

The Housing + Transportation (H+T) Affordability Index is a new and more comprehensive way of thinking about the cost of housing and true affordability by exploring the impact that transportation costs associated with location have on a household's economic bottom line. The H+T Index is an innovative tool that measures the true affordability of housing. The traditional measure of affordability used by planners, lenders, and most consumers recommends that housing should be less than 30% of income. The H+T Index, in contrast, takes into account not just the cost of housing, but the costs of housing and transportation.

$$\text{H+T Affordability Index} = \frac{\text{(Housing Costs + Transportation Costs)}}{\text{Income}}$$

The Index has received much attention from policy makers for its benefits to planners and TOD advocates and is already being used for additional research. This work represents the development the H+T Index for 337 metropolitan areas.

70%

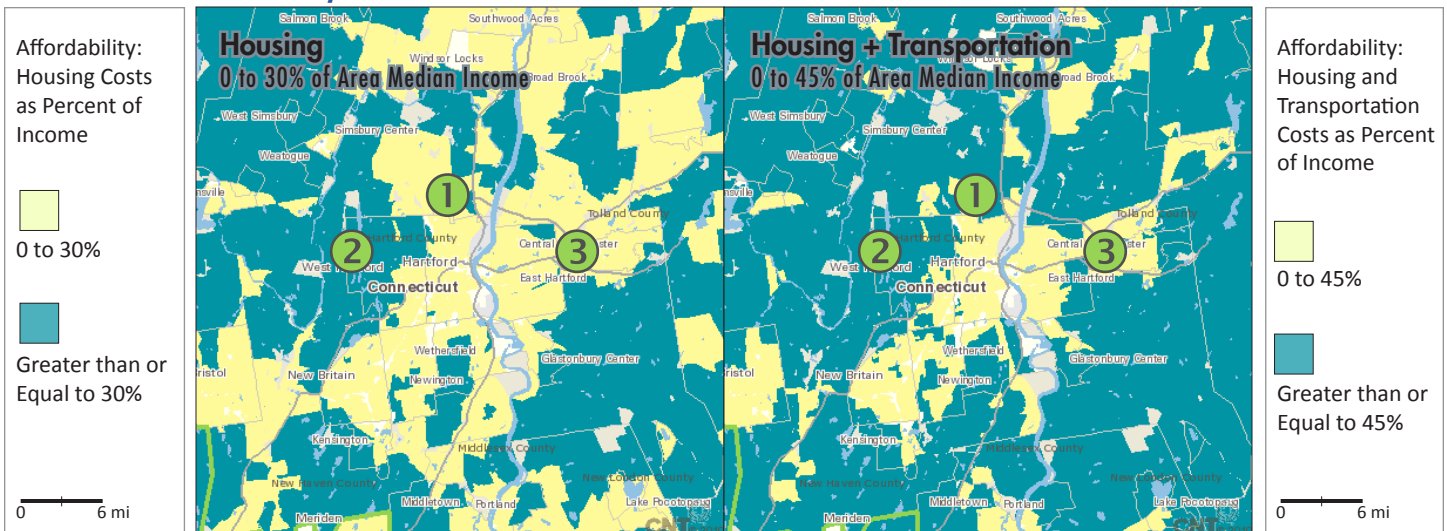

percentage of communities in the Hartford metro area considered affordable using the standard measure of 30% of income

46%

percentage of communities in the Hartford metro area considered affordable using the H+T measure of 45% of income

Two Views of Affordability

Neighborhood Profiles

- Housing Costs as a Percent of AMI
- Transportation Costs as a Percent of AMI

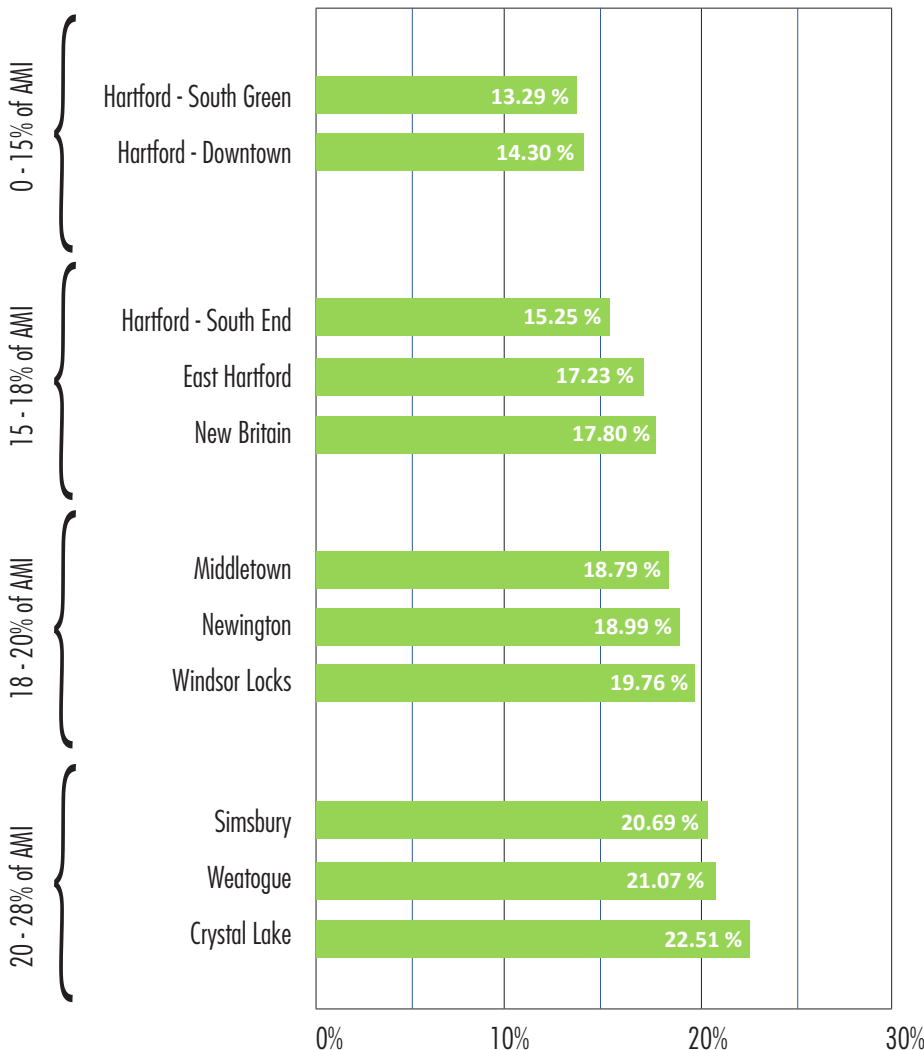

- Blue Hills Neighborhood, Hartford
- West Hartford, Hartford County
- Central Manchester, Hartford County

Neighborhood Profiles

	Blue Hills Neighborhood, Hartford	West Hartford, Hartford County	Central Manchester, Hartford County
Autos per Household	1.19	1.52	1.61
Transit Ridership	32.17 %	1.72 %	4.96 %
Households per Acre	5.09	4.69	2.53
Monthly Transportation Cost in \$	\$ 664	\$ 752	\$ 850
Household VMT	16,303	13,186	20,204

Hartford Metropolitan Area Representative Transportation Costs

AFFORDABILITY IS ABOUT MORE THAN HOME PRICE

- Housing and transportation costs give a more complete picture of affordability than the cost of housing alone.
- Household transportation costs are directly linked to a household's location and the characteristics of the neighborhood where it is situated.
- Places with access to services, walkable destinations, extensive and frequent transit, access to jobs, and density have lower household transportation costs.
- Creating neighborhoods with housing and transportation affordability requires multiple and targeted strategies and coordination within and across government agencies and the private sector.
- Underutilized transit station areas present an opportunity to create additional affordable and diverse neighborhoods.

PUBLIC POLICY ACTIONS

- 1) Adopt a new definition of affordability that includes transportation costs and a way to measure them.
- 2) Broaden incentives for regions to locate new growth in more compact, mixed-use communities near transit.

The H+T Index is available for 337 metropolitan areas at htaindex.cnt.org
